

ReleaseIT

The Next Step in Release of Information Technology

ReleaseIT enables hospitals to efficiently process and track the release of protected health information (PHI) by streamlining the work flows involved in processing requests for patient information. This turns a labor-intensive and costly release of information (ROI) function into one that allows the release of PHI in a timely, complete and confidential manner. ReleaseIT also makes it easier for organizations to bring this process in-house and manage with current staffing levels. Additionally, our product can automate the delivery of medical record documents to any of your vendor partners, i.e., coding, billing or insurance companies.

WORK FLOW IS TIME, TIME IS MONEY, ReleaseIT WILL SAVE YOU BOTH

In addition to streamlining the process of ROI, ReleaseIT provides the following benefits:

- ❖ Allows for combining and organizing of medical record pages and documents contained in any system across the enterprise
- ❖ Allows for redaction of confidential pages or sections of the record
- ❖ Logs, tracks and verifies records requests
- ❖ Offers multiple methods of delivery, including print, output to PDF, output to Disc and Email.
- ❖ Allows for combining multiple report formats into one PDF document
- ❖ Receive Email notification when PHI is received, viewed or downloaded
