

## MobileScanIM™

*Fully Integrated Inventory Management*

### Why MobileScanIM™?

- Real-time automatic transaction capture for centralized processing
- Seamless integration with MEDITECH HHT (R1247)
- Supports Android and iOS devices
- Online and offline functionality
- Inventory, item, stock, and patient-based scanning

Department Issues

Department Returns

Patient Issues

Physical Count

Initialize Inventory

Restock Requisition

Exchange Cart

Transfer

### Proven Outcomes

- Fewer stockouts and expired supplies
- Improved charge capture at point of use
- Less time spent on inventory, more time on patient care

### Inventory problems don't announce themselves. They disrupt care.

When inventory visibility breaks down, clinical focus shifts from patient care to supply management and recovery.

### The Challenges MobileScanIM™ Solves

- Disconnected inventory systems: Inventory on the shelf does not match the system, leading to stockouts, overstock, and expired supplies.
- Manual, error-prone workflows: Paper processes and delayed entry create blind spots and rework.
- Clinicians pulled from patient care: Time spent managing supplies reduces focus on patients.
- Lost revenue from missed charge capture: Supplies not recorded at the point of use result in delayed or lost charges.

- On premise or SaaS deployment
- Centralized WebApp
- Supports on-site and remote use, both online and offline
- Warehouse inventory management
- Department level inventory management
- Multi-facility support including hospitals, clinics, and urgent care centers

Available on supported mobile operating systems via the app store.

Android 

 iOS

## Before MobileScanIM™

- ✗ Manual counts
- ✗ Delayed inventory updates
- ✗ Stockouts
- ✗ Missed charges
- ✗ Clinician frustration

## After MobileScanIM™

- ✓ Scan at point of use
- ✓ Real-time accuracy
- ✓ Auto replenishment
- ✓ Accurate billing
- ✓ Care-first focus
- ✓ Healthcare operations enhancement

## Core Capabilities

- Issues & returns (Dept. & Patient)
- Physical inventory counts
- Restock requisitions
- Exchange cart & transfers
- Inventory initialization
- Web-based configuration & control
